

OnLine Analytical Processing exclusively from Enfinity®

Create Any Analysis You Want

ENLIGHTEN is a brand new software module from Solutions by Computer that uses the power of the Enfinity® system to provide you with virtually limitless, online analytical processing capabilities. ENLIGHTEN's capabilities are far from ordinary: customer, inventory and transaction data appears in a dynamic, multi-dimensional presentation that makes it easy to spot relationships and trends.

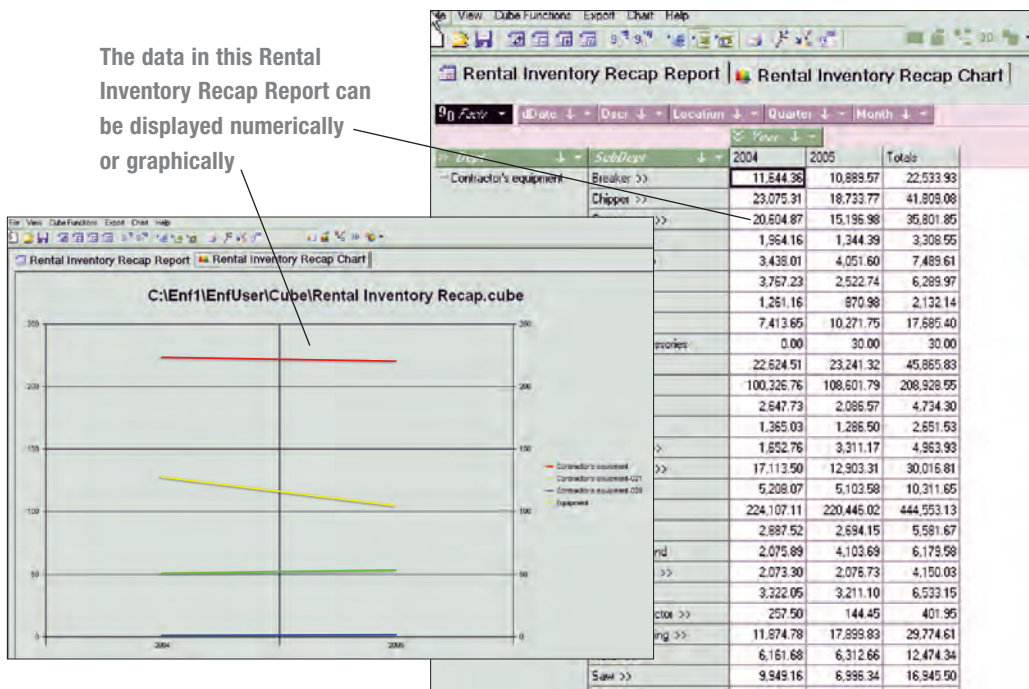

You can drag, drop and rearrange elements in the display to achieve virtually any objective, and see the results in absolute real-time.

For example, ENLIGHTEN can instantly conceptualize a high-level presentation of revenue for any time period by major rental product group ... and then drill down to the various components of that group ... and then further analyze the data to uncover revenue trends by the type of customer renting those specific products. Data appears in numerical or graphical format to suit your preference.

Expert at Rental

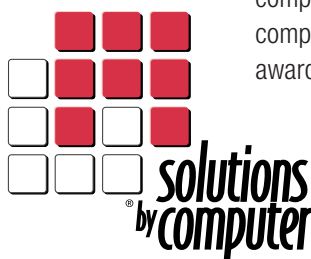

One of ENLIGHTEN's key advantages is that its capabilities are extremely rental-savvy. For example:

- ▶ The history of a product group can be analyzed as to revenue trends by postal code, specifying the "use at" jobsite address associated with the transactions to give an accurate analysis of geographic utilization
- ▶ Cancelled rental reservations and quotations can be analyzed as to the reasons behind the cancellations, allowing you to modify marketing policies if necessary

ENLIGHTEN Key Features:

- Exports to Excel®, HTML, etc.
- Comprehensive trend analysis
- Includes/excludes data elements with a single click
- Drag-and-drop parameters
- Automatic charts

Solutions introduced Enfinity in 2005 as the new flagship system for rental, sales and service businesses. It is the second comprehensive management system brought to market by our company, and the third successful system created by our award-winning development team.
