

Industry leading business automation

More than 25 years of experience developing

specialized systems for your industry

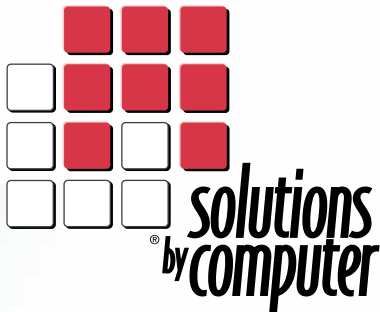

As you investigate management systems for your business, take a careful look at the company behind each product. You will be choosing a supplier as much as a system, and your decision will impact your business for years to come.

Solutions by Computer systems are the leading choice of businesses with rental operations, but that alone doesn't tell the whole story. It is important to know *why* our systems succeed.

Solutions has maintained a sole focus on rental, sales and service automation since our company was founded in 1982. We have been under experienced, industry-savvy management continuously from that time: operations, product development and support services are all guided by individuals with many years of rental industry experience. To understand the importance of this in practical terms, consider the market enthusiasm for our first system, CounterPro®, which earned a leadership position within 18 months of introduction.

The same technology team responsible for CounterPro's original design and ongoing development are now the creative force behind our Enfinity® management system, a fact that should mean a great deal as you evaluate system suppliers. For the second time in our company's history, superior experience resulted in a superior system design – Enfinity won two industry awards for innovation in its debut year.

Longevity, financial stability and staffing levels are also important considerations. Our company's support department has been in continuous operation for over two decades, and currently numbers more than 30 people. By investing in customer-oriented services such as support and ongoing software enhancements, we maintain our reputation for reliability and responsiveness. We are particularly proud that Solutions has been honored with the American Rental Association's prestigious Special Service Award for "performing outstanding service and contributions for the good of the equipment rental industry." Our company brings that same commitment to every business and customer we serve.

Products

Enfinity[®]

Operating system: Windows[®]

Introduced in 2005 as a ground-up system development, Enfinity's revolutionary design marries Solutions' powerful rental applications with post-relational Caché database technology for superior performance and unrestricted expansion. In addition, Enfinity's powerful tree-builder interface is uniquely relevant to the data management needs of rental operations. Inventory and other data is organized to allow modifications such as rate changes to flow automatically and logically through certain branches of the tree based on a single entry.

CounterPro[®]

Operating system: Unix[®]

Introduced in 1983 as our company's flagship rental management system, and currently operating more than 2,200 tool, equipment, event and specialty rental locations in North America, Latin America and Europe.

Services

Implementation

Data entry services and data conversion services are available. A Solutions professional installer can provide on-site assistance during the system installation at your business.

Training

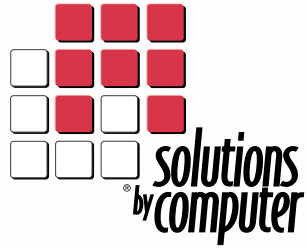

Solutions offers a number of training options, including instruction at our office or your business, and Internet-based training. We also conduct training seminars at national and regional user meetings and trade shows.

Support

Our customers can subscribe to unlimited, toll-free diagnostic and support services from multiple offices and time zones, and receive software enhancements at no charge. When you purchase a Solutions system, you automatically gain free access to our online knowledge base and user community at sbcXchange.com
